NEW ANCORVIS IS CONFIRMED AS YOUR IDEAL PARTNER

IN THIS
PAMPHLET

UNENCRYPTED AND
FREE IMPLANT
LIBRARIES

OVER 500
IMPLANT PLATFORMS

IN-HOUSE
PRODUCTIONS
DEDICATED
COMPONENTS

THIS IS WHAT YOU CAN DO WITH US

NEW ANCORVIS think about yourself!

You might not know, but for over 3 years we have made a library system available free of charge, on **over 500 implant platforms**, for the production of abutments, bars, crowns and bridges.

The libraries can be installed on all the main modelling software (**ExoCad, 3Shape, Dentalwings, EGS**) and allow for the **angled screw channel to be managed** on individual elements, bridges, with the screw-retained technique and for bonding.

In projects for the **bonding technique**, they also allow for the following to be managed: **the height of the link, the diameter of the screw hole, the inclination of the through channel, the different coupling tolerances between the link and the prosthetic part**. And also: the actual housing of the New Ancorvis analogue for the creation of 3D printed digital models, also in-house; and again **for in-house productions**, they allow you to count on real implant connections for the direct milling of screw-retained bridges, abutments or screw-retained crowns with the dedicated implant components.
